Dear Sir/Madam,

APPLICATION FOR THE POSITION OF DATA ANALYST

I wish to apply for the position of Data Analyst in your prestigious organization. I hold a degree in Applied Accounting from Oxford Brookes University, but I currently work as a data analyst/scientist.

I have experience building scripts for automating the sourcing of data through either web scraping or database apis, analyzing the data, building machine learning models, and producing interactive dashboards and markdown reports of my analysis. I also know how to generate synthetic data using the Generative Adversarial Network method in R.

I am a very hardworking, dedicated, and committed person, who is a good team player, and who loves to come up with interesting ideas that can make a positive impact. I am highly motivated and very organized.

My suitability for the job can be inferred from my tech stack, which includes R, RShiny, Python, Hugging Face Models, Gephi, Neo4j, Github, and SQL. I particularly enjoy finding social network patterns in data, and either querying that pattern in Neo4j or analyzing it in Gephi.

A copy of my CV is attached to this application for your perusal, and I sincerely hope to hear from you soon.

Your sincerely,

Ifeanyi Idiaye
